TITLE: Slide for wet or moist biological specimens, e.g. blood

----- KWIC -----

Abstract Text - FPAR (1):

CHG DATE=19990617 STATUS=O> There is described a slide for wet or moist biological specimens, e.g. blood, which comprises a plastic plate (12) with several depressions (16) formed in the surface (14) of the slide (10) for the reception of the specimens, with a hydrophilic surface coating that is limited to the depressions (16), whereas the surface (14) of the slide (10) is hydrophobic around the depressions (16). According to the invention, the depressions (16) are each delimited by an edge (18) that projects beyond the surface (14) of the slide (10). <IMAGE>
